Capital Improvement Plan

Introduction

On behalf of the FDOT Aviation Office, URS/MACTEC team has developed a multi-year capital improvement program (CIP) which identifies preventive and major rehabilitation work required from 2008 to 2017. MicroPAVER was selected as the software for calculating the CIP. The CIP assist the airports to determine the funding required for the airport planning and development projects.

The M&R analysis results provide a list of all M&R needs without regard to budget levels. These activities would need to be evaluated for feasibility and desirability based on the Airport, State and District's future plans. In an effort to identify appropriate budget levels the 10 year M&R analysis was evaluated to determine levels needed to address several specific areas: preventive maintenance, major activities for pavements in poor condition (Major M&R for PCI less than Critical), and activities that would be desirable to preserve good pavement conditions where they exist (Major M&R for PCI greater than or equal to Critical).

The unlimited budget scenario provides the basis for estimating the total repair cost. In reality, it is neither operationally nor fiscally prudent. The unit cost for the preventive and major M&R activities is listed in Tables 7-4 and 7-5 (Executive Summary-Volume 1)

Appendix C provides details of major M&R plan by airport. Appendix D provides maintenance plan for the first year (2008) by airport. It is important to understand that a PMS is a network level tool and the M&R costs provided in this report are only for planning purposes.

CAPITAL IMPROVEMENT PLAN

APPENDIX C – MAJOR M&R BY AIRPORT
APPENDIX D – MAINTENANCE BY AIRPORT

APPENDIX C

MAJOR M&R BY AIRPORT
