About Carrabelle – Thompson Airport

Carrabelle – Thompson Airport (X13) is a general aviation (GA) airport located west of U.S. Highway 98 and two miles west of downtown Carrabelle. The airport has one asphalt runway that is 4,000 feet long by 75 feet wide (Runway 05/23). The airport is known for recreation flying and military operations. The airport is a destination for tourists who fly-in for lunch and overnight stays in Carrabelle and neighboring communities. Many recreational flyers use the Carrabelle – Thompson Airport to access beaches, boating opportunities, second homes located nearby. The airport also plays an important role in enhancing the quality of life enjoyed in the Florida Panhandle. X13 supports law enforcement activities, wildland firefighting surveys and control, search and rescue operations, and air medical flying. An engaged Airport Advisory Board works on short- and long-term plans for the airport, and an active local flying club with a Cessna 172 based at X13 holds monthly meetings. Demand at the airport is strong, and the airport continues to expand its facilities to meet the growing needs of aviation users in the area. All hangars are currently full and 14 people are on a waiting list. A new hangar was constructed in 2019, and additional hangar development is now in the planning stage.

STUDY OVERVIEW

Florida's over 125 public-use airports are economic engines for the state, representing some of the largest aviation facilities in the world and providing critical transportation connections for their local communities. By supporting jobs both on- and off- airport property, Florida's airports support the infrastructure necessary for important activities such as manufacturing, logistics, tourism, and emergency response.

In 2021, Florida welcomed over 43 million out-of-state visitors through its commercial service airports and over 4.6 million visitors through its general aviation airports. Over 3,500 businesses operate at Florida's airports and their 161,000 direct employees create substantial economic impacts.

To help quantify and communicate these immense contributions, the FDOT Aviation Office initiated the development of the 2022 Florida Aviation Economic Impact Study. This study calculates each airport's annual monetary contribution to their local, regional, and statewide economies. This study determined that Florida's aviation system generated 2,009,088 jobs and contributed \$336 billion in 2021 to the state's economy, accounting for 13.5% of Florida's gross domestic product (GDP).²

What is Economic Impact?

The economic impacts of each airport and the state are defined by the total jobs, payroll, value added, and economic impact (output) generated by aviation in the state. These are defined as:

JOBS

The sum of full-time and part-time employees, and account for the total number of people employed as a result of the airport or company within a defined geography or industry.

PAYROLL

Total compensation for work, including gross wages, salaries, employer-provided benefits and taxes paid to governments on behalf of employees.

VALUE ADDED

Consists of compensation of employees, taxes paid on production and imports, and gross operating surplus. Value added equals the difference between an industry's gross output and the cost of its intermediate inputs.

ECONOMIC IMPACT (OUTPUT)

The value of sales or receipts and other operating income along with any inventory change (e.g., spoilage, breakage, or theft). It is the equivalent of value added plus the cost of all intermediate inputs (including energy, raw materials, semi-finished goods, and services) that are purchased from all sources/locations.

OFF-AIRPORT AIR CARGO

Off-airport air cargo is a new component of this study which assesses the cargo activity that interacts with Florida's businesses and relies on Florida's airports. The off-airport air cargo component was developed to highlight Florida's diverse industries that depend on airports to support business activity.
