About Plant City Airport

Plant City Airport (PCM) is approximately 18 miles east of Tampa in Hillsborough County. The airport is owned and operated by the Hillsborough County Aviation Authority. PCM provides one paved runway (Runway 10/28) that measures 3,950 feet long by 75 feet wide. Initially founded to ship strawberries, the airport has supported the local economy and community for over 60 years. The airport hosts the annual Plant City Planes, Trains, and Automobiles event, a day-long exhibition showcasing all modes of classic and exotic vehicles. PCM is also home to a unique avionics program operated in partnership with the University of Central Florida. This comprehensive program offers an FAA-certified avionics training program encompassing education, test preparation, certification, and job placement services. A local chapter of the Experimental Aircraft Association (EAA) offers Young Eagles flights to introduce youth to aviation. Plant City Airport has grown significantly in recent years to meet growing aviation demands. In 2019, PCM welcomed Atlas Aviation, a full-service fixed-base operator (FBO) that provides aircraft maintenance and flight instruction. Several airside and landside improvements have also been completed, including an airside pavement rehabilitation, the installation of new tie-downs and airport fencing, and terminal enhancements.

STUDY OVERVIEW

Florida's over 125 public-use airports are economic engines for the state, representing some of the largest aviation facilities in the world and providing critical transportation connections for their local communities. By supporting jobs both on- and off- airport property, Florida's airports support the infrastructure necessary for important activities such as manufacturing, logistics, tourism, and emergency response.

In 2021, Florida welcomed over 43 million out-of-state visitors through its commercial service airports and over 4.6 million visitors through its general aviation airports. Over 3,500 businesses operate at Florida's airports and their 161,000 direct employees create substantial economic impacts.

To help quantify and communicate these immense contributions, the FDOT Aviation Office initiated the development of the 2022 Florida Aviation Economic Impact Study. This study calculates each airport's annual monetary contribution to their local, regional, and statewide economies. This study determined that Florida's aviation system generated 2,009,088 jobs and contributed \$336 billion in 2021 to the state's economy, accounting for 13.5% of Florida's gross domestic product (GDP).²

What is Economic Impact?

The economic impacts of each airport and the state are defined by the total jobs, payroll, value added, and economic impact (output) generated by aviation in the state. These are defined as:

JOBS

The sum of full-time and part-time employees, and account for the total number of people employed as a result of the airport or company within a defined geography or industry.

PAYROLL

Total compensation for work, including gross wages, salaries, employer-provided benefits and taxes paid to governments on behalf of employees.

VALUE ADDED

Consists of compensation of employees, taxes paid on production and imports, and gross operating surplus. Value added equals the difference between an industry's gross output and the cost of its intermediate inputs.

ECONOMIC IMPACT (OUTPUT)

The value of sales or receipts and other operating income along with any inventory change (e.g., spoilage, breakage, or theft). It is the equivalent of value added plus the cost of all intermediate inputs (including energy, raw materials, semi-finished goods, and services) that are purchased from all sources/locations.

OFF-AIRPORT AIR CARGO

Off-airport air cargo is a new component of this study which assesses the cargo activity that interacts with Florida's businesses and relies on Florida's airports. The off-airport air cargo component was developed to highlight Florida's diverse industries that depend on airports to support business activity.
