About Apalachicola Regional-Cleve Randolph Field

Apalachicola Regional Airport-Cleve Randolph Field (AAF) is a general aviation (GA) airport approximately two miles west of Apalachicola and north of Apalachicola Bay. The airport has three concrete runways (14/32, 06/24, and 18/36), the longest of which is 5,425 feet long and 150 feet wide. The airport primarily accommodates recreational flying, corporate/business aviation, flight training, and military operations. The airport's fixed-base operator (FBO) offers rental cars, aircraft parking, fuel, a pilot's lounge, and other aviation services. For transient pilots, AAF offers a gateway to the unique and historic city of Apalachicola. Apalachicola is known for its rich history; maritime culture; seafood industry; and is home numerous local shops, galleries, and restaurants. AAF provides access to destinations along the Florida Panhandle, and based aircraft owners live across the region from Cape San Blas to Mexico Beach. AAF continues to construct hangars to accommodate growing demands for GA aircraft used for recreational and commercial purposes.

STUDY OVERVIEW

Florida's over 125 public-use airports are economic engines for the state, representing some of the largest aviation facilities in the world and providing critical transportation connections for their local communities. By supporting jobs both on- and off-airport property, Florida's airports support the infrastructure necessary for important activities such as manufacturing, logistics, tourism, and emergency response.

In 2021, Florida welcomed over 43 million out-of-state visitors through its commercial service airports and over 4.6 million visitors through its general aviation airports. Over 3,500 businesses operate at Florida's airports and their 161,000 direct employees create substantial economic impacts.

To help quantify and communicate these immense contributions, the FDOT Aviation Office initiated the development of the 2022 Florida Aviation Economic Impact Study. This study calculates each airport's annual monetary contribution to their local, regional, and statewide economies. This study determined that Florida's aviation system generated 2,009,088 jobs and contributed \$336 billion in 2021 to the state's economy, accounting for 13.5% of Florida's gross domestic product (GDP).²

What is Economic Impact?

The economic impacts of each airport and the state are defined by the total jobs, payroll, value added, and economic impact (output) generated by aviation in the state. These are defined as:

JOBS

The sum of full-time and part-time employees, and account for the total number of people employed as a result of the airport or company within a defined geography or industry.

PAYROLL

Total compensation for work, including gross wages, salaries, employer-provided benefits and taxes paid to governments on behalf of employees.

VALUE ADDED

Consists of compensation of employees, taxes paid on production and imports, and gross operating surplus. Value added equals the difference between an industry's gross output and the cost of its intermediate inputs.

ECONOMIC IMPACT (OUTPUT)

The value of sales or receipts and other operating income along with any inventory change (e.g., spoilage, breakage, or theft). It is the equivalent of value added plus the cost of all intermediate inputs (including energy, raw materials, semi-finished goods, and services) that are purchased from all sources/locations.

OFF-AIRPORT AIR CARGO

Off-airport air cargo is a new component of this study which assesses the cargo activity that interacts with Florida's businesses and relies on Florida's airports. The off-airport air cargo component was developed to highlight Florida's diverse industries that depend on airports to support business activity.
