About Lake City Gateway Airport

Lake City Gateway Airport (LCQ) is a publicly owned general aviation (GA) airport in north-central Florida, located three miles east of Lake City. LCQ has two paved runways, the longest of which (Runway 10/28) is 8,003 feet long by 150 feet wide. LCQ is home to several businesses that provide specialized aviation services and generate economic activity for the community and state. Notably, the airport is home to HAECO, an aircraft maintenance, repair, and overhaul (MRO) provider that specializes in outfitting airliner interiors. The airport also owns an adjacent industrial park with several large timber and home building facilities. With convenient access to several major highways and rail lines, as well as land available for development, LCQ is poised to expand its business activities. In addition to these commercial activities, LCQ supports corporate/business aviation, flight training, recreational flying, and critical emergency services. The airport is home to a United States (U.S.) Department of Agriculture Forest Service air tanker base that accommodates large jet tanker aircraft. This base provides critical aerial firefighting services across the southeastern U.S., further enhancing LCQ's valuable role in the community and beyond.

STUDY OVERVIEW

Florida's over 125 public-use airports are economic engines for the state, representing some of the largest aviation facilities in the world and providing critical transportation connections for their local communities. By supporting jobs both on- and off-airport property, Florida's airports support the infrastructure necessary for important activities such as manufacturing, logistics, tourism, and emergency response.

In 2021, Florida welcomed over 43 million out-of-state visitors through its commercial service airports and over 4.6 million visitors through its general aviation airports. Over 3,500 businesses operate at Florida's airports and their 161,000 direct employees create substantial economic impacts.

To help quantify and communicate these immense contributions, the FDOT Aviation Office initiated the development of the 2022 Florida Aviation Economic Impact Study. This study calculates each airport's annual monetary contribution to their local, regional, and statewide economies. This study determined that Florida's aviation system generated 2,009,088 jobs and contributed \$336 billion in 2021 to the state's economy, accounting for 13.5% of Florida's gross domestic product (GDP).²

²Totals include new off-airport air cargo impacts developed for this update

What is Economic Impact?

The economic impacts of each airport and the state are defined by the total jobs, payroll, value added, and economic impact (output) generated by aviation in the state. These are defined as:

JOBS

The sum of full-time and part-time employees, and account for the total number of people employed as a result of the airport or company within a defined geography or industry.

PAYROLL

Total compensation for work, including gross wages, salaries, employer-provided benefits and taxes paid to governments on behalf of employees.

VALUE ADDED

Consists of compensation of employees, taxes paid on production and imports, and gross operating surplus. Value added equals the difference between an industry's gross output and the cost of its intermediate inputs.

ECONOMIC IMPACT (OUTPUT)

The value of sales or receipts and other operating income along with any inventory change (e.g., spoilage, breakage, or theft). It is the equivalent of value added plus the cost of all intermediate inputs (including energy, raw materials, semi-finished goods, and services) that are purchased from all sources/locations.

OFF-AIRPORT AIR CARGO

Off-airport air cargo is a new component of this study which assesses the cargo activity that interacts with Florida's businesses and relies on Florida's airports. The off-airport air cargo component was developed to highlight Florida's diverse industries that depend on airports to support business activity.
