About Northeast Florida Regional Airport

Northeast Florida Regional Airport (SGJ) is a general aviation (GA) airport located approximately four miles north of St. Augustine, known as the oldest city in America. The airport offers three paved runways, the longest of which is 8,001 feet long by 150 feet wide (13/31). The airport also has several water runways, providing a unique landing environment. Limited commercial service is offered through Elite Airways, with direct service to Newark, New Jersey and Portland, Maine. The majority of the operations at SGJ are GA, with activities including corporate and business travel, public charters, military exercises/training, and aerial business operations. These businesses include flight training schools, aerobatic training services, and a fixed base operator (FBO) offering aviation fueling and other services. A notable business located on airport property is Northrop Grumman, an aerospace defense contractor, which is responsible for over 1,000 jobs for the local community. For those pilots and visitors flying into SGJ, there are many local attractions nearby, including Ponce de Leon's Fountain of Youth, the World Golf Hall of Fame, and many other activities such as fishing, golfing, camping, or just relaxing on Florida's Atlantic beaches.

STUDY OVERVIEW

Florida's over 125 public-use airports are economic engines for the state, representing some of the largest aviation facilities in the world and providing critical transportation connections for their local communities. By supporting jobs both on- and off- airport property, Florida's airports support the infrastructure necessary for important activities such as manufacturing, logistics, tourism, and emergency response.

In 2021, Florida welcomed over 43 million out-of-state visitors through its commercial service airports and over 4.6 million visitors through its general aviation airports. Over 3,500 businesses operate at Florida's airports and their 161,000 direct employees create substantial economic impacts.

To help quantify and communicate these immense contributions, the FDOT Aviation Office initiated the development of the 2022 Florida Aviation Economic Impact Study. This study calculates each airport's annual monetary contribution to their local, regional, and statewide economies. This study determined that Florida's aviation system generated 2,009,088 jobs and contributed \$336 billion in 2021 to the state's economy, accounting for 13.5% of Florida's gross domestic product (GDP).²

What is Economic Impact?

The economic impacts of each airport and the state are defined by the total jobs, payroll, value added, and economic impact (output) generated by aviation in the state. These are defined as:

JOBS

The sum of full-time and part-time employees, and account for the total number of people employed as a result of the airport or company within a defined geography or industry.

PAYROLL

Total compensation for work, including gross wages, salaries, employer-provided benefits and taxes paid to governments on behalf of employees.

VALUE ADDED

Consists of compensation of employees, taxes paid on production and imports, and gross operating surplus. Value added equals the difference between an industry's gross output and the cost of its intermediate inputs.

ECONOMIC IMPACT (OUTPUT)

The value of sales or receipts and other operating income along with any inventory change (e.g., spoilage, breakage, or theft). It is the equivalent of value added plus the cost of all intermediate inputs (including energy, raw materials, semi-finished goods, and services) that are purchased from all sources/locations.

OFF-AIRPORT AIR CARGO

Off-airport air cargo is a new component of this study which assesses the cargo activity that interacts with Florida's businesses and relies on Florida's airports. The off-airport air cargo component was developed to highlight Florida's diverse industries that depend on airports to support business activity.
