About La Belle Municipal Airport

La Belle Municipal Airport (X14) is a general aviation (GA) airport located within the city of LaBelle, between Fort Meyers and West Palm Beach. The airport offers one paved runway that is 5,254 feet long by 75 feet wide (Runway 14/32). The airport is a popular destination for many transient aircraft, local flight training providers, and agricultural spraying operators. The airport strives to provide the cheapest fuel prices in southwest Florida. As a result, many pilots choose to refuel at X14 when flying to and from southwest Florida. Visiting pilots and passengers are also able to enjoy a charming dining experience at Short Cakes, the restaurant located in the newly renovated terminal building. The terminal also offers a pilot's lounge and free concessions. Other amenities available at X14 include T-hangars, box hangars, and aircraft tie-downs. The airport is in the process of constructing a new parallel taxiway and hangar facility west of the runway, offering an additional level of service to based and itinerant pilots. These amenities and services make X14 a favorable destination for pilots and passengers looking for an airport where they can top off their fuel tanks and possibly spend the weekend visiting southwest Florida.

STUDY OVERVIEW

Florida's over 125 public-use airports are economic engines for the state, representing some of the largest aviation facilities in the world and providing critical transportation connections for their local communities. By supporting jobs both on- and off- airport property, Florida's airports support the infrastructure necessary for important activities such as manufacturing, logistics, tourism, and emergency response.

In 2021, Florida welcomed over 43 million out-of-state visitors through its commercial service airports and over 4.6 million visitors through its general aviation airports. Over 3,500 businesses operate at Florida's airports and their 161,000 direct employees create substantial economic impacts.

To help quantify and communicate these immense contributions, the FDOT Aviation Office initiated the development of the 2022 Florida Aviation Economic Impact Study. This study calculates each airport's annual monetary contribution to their local, regional, and statewide economies. This study determined that Florida's aviation system generated 2,009,088 jobs and contributed \$336 billion in 2021 to the state's economy, accounting for 13.5% of Florida's gross domestic product (GDP).²

What is Economic Impact?

The economic impacts of each airport and the state are defined by the total jobs, payroll, value added, and economic impact (output) generated by aviation in the state. These are defined as:

JOBS

The sum of full-time and part-time employees, and account for the total number of people employed as a result of the airport or company within a defined geography or industry.

PAYROLL

Total compensation for work, including gross wages, salaries, employer-provided benefits and taxes paid to governments on behalf of employees.

VALUE ADDED

Consists of compensation of employees, taxes paid on production and imports, and gross operating surplus. Value added equals the difference between an industry's gross output and the cost of its intermediate inputs.

ECONOMIC IMPACT (OUTPUT)

The value of sales or receipts and other operating income along with any inventory change (e.g., spoilage, breakage, or theft). It is the equivalent of value added plus the cost of all intermediate inputs (including energy, raw materials, semi-finished goods, and services) that are purchased from all sources/locations.

OFF-AIRPORT AIR CARGO

Off-airport air cargo is a new component of this study which assesses the cargo activity that interacts with Florida's businesses and relies on Florida's airports. The off-airport air cargo component was developed to highlight Florida's diverse industries that depend on airports to support business activity.
